# 1. General Specifications

## 1.1 LCM General Information

| Item                  | Specification                      | Unit     |
|-----------------------|------------------------------------|----------|
| LCD Size              | 7.5                                | inch     |
| Number of Pixels      | 800 (H) RGB x 800 (V)              | pixels   |
| Display Mode          | Normally Black                     | -        |
| Viewing Direction     | Free                               | o' clock |
| Interface             | MIPI                               | -        |
| Display Colors        | 16.7M                              | colors   |
| Outline Dimension     | 142.52 (H) x 148.20 (V) x 6.96 (D) | mm       |
| Active Area           | 135.36 (H) x 135.36 (V)            | mm       |
| Pixel Pitch           | 0.1692 (H) x 0.1692(V)             | mm       |
| Driver IC             | ILI9881C                           | -        |
| Operation Temperature | -20~70                             | °C       |
| Storage Temperature   | -30~80                             | °C       |

## 1.2 Touch Panel Information

| Item                  | Specification       |
|-----------------------|---------------------|
| Touch Structure       | G+G                 |
| Bonding Type with LCM | OCA Optical Bonding |
| Driver IC             | GT9271              |
| Interface             | I <sup>2</sup> C    |
| Touch Count Max       | 5 Points            |
| Surface treatment     | -                   |
| Surface hardness      | 6H                  |
| I2C slave address     | 0x28                |
| Origin of coordinate  | Top Left Corner     |

Note1:Requirements on environmental protection RoHS compliant.

## 2. Absolute Maximum Ratings

| Item                   | Symbol | MIN. | MAX. | Unit | Note   |
|------------------------|--------|------|------|------|--------|
| Analog Supply voltage  | VDD    | -0.3 | 5.0  | V    | Note 1 |
| Digital supply voltage | IOVCC  | -0.3 | 3.6  | V    | Note 1 |

Note 1: Permanent damage may occur to the LCD module if beyond this specification.

Functional operation should be restricted to the conditions described under normal operating conditions.

## 3. Electrical Characteristics

### 3.1 Recommended Operating Condition for TFT LCD

| Item                  | Symbol             | Min.      | Typ. | Max.      | Unit | Note       |
|-----------------------|--------------------|-----------|------|-----------|------|------------|
| Analog Supply voltage | VDD                | 3.0       | 3.3  | 3.6       | V    |            |
| Analog supply current | I <sub>VDD</sub>   | -         | TBD  | -         | mA   | VDD=3.3V   |
| Logic supply voltage  | IOVCC              | 1.65      | 1.8  | 3.3       | V    |            |
| Logic supply current  | I <sub>IOVCC</sub> | -         | TBD  | -         | mA   | IOVCC=1.8V |
| Logic input voltage   | VIH                | 0.7*IOVCC | -    | IOVCC     | V    |            |
|                       | VIL                | GND       | -    | 0.3*IOVCC | V    |            |

### 3.2 Recommended Driving Condition for Backlight

| Item              | Symbol          | Min.   | Typ.   | Max.  | Unit  | Note              |
|-------------------|-----------------|--------|--------|-------|-------|-------------------|
| Driving Current   | I <sub>F</sub>  | -      | 225    | -     | mA    |                   |
| Driving Voltage   | V <sub>F</sub>  | 13.5   | -      | 17.0  | V     |                   |
| Power consumption | W <sub>BL</sub> | 3.0375 | -      | 3.825 | W     |                   |
| LED Life-Time     | N/A             | -      | 50,000 | -     | Hours | Ta=25°C<br>Note 1 |

Note 1: LED lifetime is defined as the module brightness decay 50% of original brightness at Ta=25 degree, typical current.

Note 2:LED circuit :

### 3.3 Touch Panel

| Item                     | Symbol           | Min.    | Typ. | Max.    | Unit | Note     |
|--------------------------|------------------|---------|------|---------|------|----------|
| Power Supply voltage     | VCC              | -       | 3.3  | -       | V    |          |
| Analog supply current    | I <sub>VCC</sub> | -       | TBD  | -       | mA   | VCC=3.3V |
| Input high-level voltage | VIH              | 0.7*VCC | -    | VCC     | V    |          |
| Input low -level voltage | VIL              | GND     | -    | 0.3*VCC | V    |          |

## 4. Interface Pin Assignment

### 4.1 LCM Pin Assignment

| No.   | Symbol   | Description                       |
|-------|----------|-----------------------------------|
| 1     | NC       | No connection                     |
| 2     | VDD      | Power supply                      |
| 3     | VCCIO    | Power supply                      |
| 4     | GND      | Ground                            |
| 5     | RESET    | Global reset pin                  |
| 6     | NC       | No connection                     |
| 7     | GND      | Ground                            |
| 8     | MIPI_0N  | MIPI Negative data signal(-)      |
| 9     | MIPI_0P  | MIPI Positive data signal(+)      |
| 10    | GND      | Ground                            |
| 11    | MIPI_1N  | MIPI Negative data signal(-)      |
| 12    | MIPI_1P  | MIPI Positive data signal(+)      |
| 13    | GND      | Ground                            |
| 14    | MIPI_CKN | MIPI Negative clock signal(-)     |
| 15    | MIPI_CKP | MIPI Positive clock signal(+)     |
| 16    | GND      | Ground                            |
| 17    | MIPI_2N  | MIPI Negative data signal(-)      |
| 18    | MIPI_2P  | MIPI Positive data signal(+)      |
| 19    | GND      | Ground                            |
| 20    | MIPI_3N  | MIPI Negative data signal(-)      |
| 21    | MIPI_3P  | MIPI Positive data signal(+)      |
| 22    | GND      | Ground                            |
| 23-24 | NC       | No connection                     |
| 25    | GND      | Ground                            |
| 26    | ID       | LCM_ID                            |
| 27    | NC       | No connection                     |
| 28    | GND      | Ground                            |
| 29-30 | LED-     | Power for LED backlight (Cathode) |
| 31    | NC       | No connection                     |
| 32-33 | LED+     | Power for LED backlight (Anode)   |
| 34    | TP_SCL   | I2C clock input for CTP           |
| 35    | TP_SDA   | I2C data input and output for CTP |
| 36    | TP_INT   | Interrupt signal for CTP          |
| 37    | TP_RESET | Reset Pin for CTP                 |
| 38    | TP_VCC   | Power supply for CTP              |
| 39    | TP_GND   | Ground for CTP                    |
| 40    | GND      | Ground                            |

## 5. Interface Characteristics

### 5.1 Power On/Off Sequence

#### Case A:

#### Case B:

| Symbol           | Characteristics           | Min. | Typ. | Max. | Units |
|------------------|---------------------------|------|------|------|-------|
| $T_{VDDI\_RISE}$ | VDDI Rise time            | 20   | -    | -    | us    |
| $T_{VCI\_RISE}$  | Case A: VCI Rise time     | 200  | -    | -    | us    |
|                  | Case B: VCI Rise time     | 40   |      |      |       |
| $T_{PS\_RES}$    | VDDI/VCI on to Reset high | 5    | -    | -    | ms    |
| $T_{RES\_PULSE}$ | Reset low pulse time      | 10   | -    | -    | us    |
| $T_{FS\_CMD}$    | Reset to first command    | 10   | -    | -    | ms    |

Figure 105: Power on/off sequence with Power Mode 3

## 5.2 Reset Timing Characteristics

**Figure 124: Reset Timing**

**Table 47: Reset Timing**

| Signal | Symbol | Parameter            | Min | Max                              | Unit |
|--------|--------|----------------------|-----|----------------------------------|------|
| RESX   | tRW    | Reset pulse duration | 10  |                                  | uS   |
|        | tRT    | Reset cancel         |     | 5 (note 1,5)<br>120 (note 1,6,7) | mS   |

**Notes:**

1. The reset cancel also includes required time for loading ID bytes, VCOM setting and other settings from EEPROM to registers. This loading is done every time when there is H/W reset cancel time (tRT) within 5 ms after a rising edge of RESX.
2. Spike due to an electrostatic discharge on RESX line does not cause irregular system reset according to the Table 48.

**Table 48: Reset Descript**

| RESX Pulse           | Action         |
|----------------------|----------------|
| Shorter than 5us     | Reset Rejected |
| Longer than 10us     | Reset          |
| Between 5us and 10us | Reset starts   |

3. During the Resetting period, the display will be blanked (The display enters the blanking sequence, which maximum time is 120 ms, when Reset Starts in the Sleep Out mode. The display remains the blank state in the Sleep In mode.) and then return to Default condition for Hardware Reset.
4. Spike Rejection can also be applied during a valid reset pulse, as shown below:

**Figure 125: Positive Noise Pulse during Reset Low**

5. When Reset applied during Sleep In Mode.
6. When Reset applied during Sleep Out Mode.
7. It is necessary to wait 5msec after releasing RESX before sending commands. Also Sleep Out command cannot be sent for 120msec.

## 5.3 MIPI-DSI Characteristics

### 5.3.1 High Speed Mode

Figure 116: DSI Clock Channel Timing

Table 38: DSI Clock Channel Timing

| Signal | Symbol                               | Parameter               | Min    | Max  | Unit |
|--------|--------------------------------------|-------------------------|--------|------|------|
| CLKP/N | $2xUI_{INST}$                        | Double UI instantaneous | Note 2 | 25   | ns   |
| CLKP/N | $UI_{INSTA}, UI_{INSTB}$<br>(Note 1) | UI instantaneous Half   | Note 2 | 12.5 | ns   |

### 5.3.2 High Speed Mode – Data Clock Channel Timing

Figure 117: DSI Data to Clock Channel Timings

Table 40: DSI Data to Clock Channel Timings

| Signal           | Symbol   | Parameter                | Min       | Max |
|------------------|----------|--------------------------|-----------|-----|
| DnP/N, n=0 and 1 | $t_{DS}$ | Data to Clock Setup time | $0.15xUI$ | -   |
|                  | $t_{DH}$ | Clock to Data Hold Time  | $0.15xUI$ | -   |

### 5.3.3 High Speed Mode – Rising And Falling Timings

Figure 118: Rising and Falling Timings on Clock and Data Channels

Table 41: Rise and Fall Timings on Clock and Data Channels

| Parameter                        | Symbol        | Condition          | Specification |     |                 |
|----------------------------------|---------------|--------------------|---------------|-----|-----------------|
|                                  |               |                    | Min           | Typ | Max             |
| Differential Rise Time for Clock | $t_{DRTCLK}$  | CLKP/N             | 150 ps        | -   | 0.3UI<br>(Note) |
| Differential Rise Time for Data  | $t_{DRTDATA}$ | DnP/N<br>n=0 and 1 | 150 ps        | -   | 0.3UI<br>(Note) |
| Differential Fall Time for Clock | $t_{DFTCLK}$  | CLKP/N             | 150 ps        | -   | 0.3UI<br>(Note) |
| Differential Fall Time for Data  | $t_{DFTDATA}$ | DnP/N<br>n=0 and 1 | 150 ps        | -   | 0.3UI<br>(Note) |

### 5.3.4 Timing for DSI video mode

| Parameters              | Symbols           | Min.        | Typ. | Max.   | Units     |
|-------------------------|-------------------|-------------|------|--------|-----------|
| Vertical sync. active   | VSA               | 2 (note 6)  | -    | -      | Line      |
| Vertical Back Porch     | VBP               | 14 (note 6) | -    | -      | Line      |
| Vertical Front Porch    | VFP               | 8 (note 6)  | -    | -      | Line      |
| Active lines per frame  | VACT              | -           | 1280 | -      | Line      |
| Horizontal sync. active | HSA               | 2           | -    | -      | Pixel     |
| Horizontal Porch period | HSA + HBP + HFP   | 1.8         | -    | -      | us        |
| Active pixels per line  | HACT              | -           | 720  | -      | Pixel     |
| Bit rate                | BR <sub>bps</sub> | 385         |      | Note 5 | Mbps/lane |

1 UI=1/Bit rate

$HSA(\text{pixel}) = (tHSA \times \text{lane number}) / (UI \times \text{pixel format})$

$HBP(\text{pixel}) = (tHBP \times \text{lane number}) / (UI \times \text{pixel format})$

$HFP(\text{pixel}) = (tHFP \times \text{lane number}) / (UI \times \text{pixel format})$

$$\text{Frame Rate} = \frac{BR_{bps} \times \text{Lane}_{num}}{(VACT+VSA+VBP+VFP) \times (HACT+HSA+HBP+HFP) \times \text{Pixel Format}}$$

Example : BR<sub>bps</sub> = 457Mbps/lane, 1UI=2.1883ns, Frame rate=60Hz, VACT=1280, VSA=2, VBP=30, VFP=20, HACT=720, HSA=33, HBP=100, HFP=100, Lane<sub>num</sub>=4(lane), Pixel Format=24(bit).

## 6. Optical Specifications

| Item                               | Symbol     | Condition                    | Min. | Typ. | Max. | Unit              | Note           |
|------------------------------------|------------|------------------------------|------|------|------|-------------------|----------------|
| Viewing Angle<br>(CR≥10)<br>B/L ON | $\theta_T$ | $\Phi=90^\circ$ (12 o'clock) | 75   | 80   | -    | deg               | Note2          |
|                                    | $\theta_B$ | $\Phi=270^\circ$ (6 o'clock) | 75   | 80   | -    | deg               | Note2          |
|                                    | $\theta_L$ | $\Phi=180^\circ$ (9 o'clock) | 75   | 80   | -    | deg               | Note2          |
|                                    | $\theta_R$ | $\Phi=0^\circ$ (3 o'clock)   | 75   | 80   | -    | deg               | Note2          |
| Response Time                      | $T_{ON}$   | Normal $\theta=\Phi=0^\circ$ | -    | 15   | -    | msec              | Note4          |
|                                    | $T_{OFF}$  |                              | -    | 15   | -    | msec              | Note4          |
| Contrast Ratio                     | CR         |                              | 800  | 1000 | -    | -                 | Note1<br>Note3 |
| Color Chromaticity                 | $W_X$      |                              | TBD  | TBD  | TBD  | -                 | Note1<br>Note5 |

Note 1:Definition of optical measurement system

The optical characteristics should be measured in dark room. After 5 minutes operation, the optical properties are measured at the center point of the LCD screen. All input terminals LCD panel must be ground when measuring the center area of the panel.

**Fig 1**

Note 2: Definition of viewing angle range and measurement system.  
viewing angle is measured at the center point of the LCD by CONOSCOPE(ergo-80).

**Fig 2 Definition of viewing angle**

Note 3: Definition of contrast ratio

$$CR = \frac{\text{Luminance with all pixels white}}{\text{Luminance with all pixels black}}$$

#### Note 4: Definition of Response time

The response time is defined as the LCD optical switching time interval between “White” state and “Black” state. Rise time ( $T_{ON}$ ) is the time between photo detector output intensity changed from 90% to 10%. And fall time ( $T_{OFF}$ ) is the time between photo detector output intensity changed from 10% to 90%.

#### Note 5: Definition of color chromaticity (CIE1931)

Color coordinates measured at center point of LCD.

#### Note 6: Definition of Luminance Uniformity

The luminance uniformity in surface luminance is determined by measuring luminance at each test position 1 through n, and then dividing the maximum luminance of n points luminance by minimum luminance of n points luminance. For more information see FIG.3-a/b

Note 7: Surface luminance is the luminance with all pixels displaying white.

$L_v$  = Average Surface Luminance with all white pixels ( $P_1, P_2, P_3, \dots, P_n$ )

For more information see FIG.3-a/b

Note 8: Size :  $S \leq 5"$  (see Figure a) A : 5 mm B : 5 mm. H, V : Active area

Light spot size  $\varnothing = 5\text{mm}$  (BM-5) or  $\varnothing = 7.7\text{mm}$  (BM-7) 50cm distance or test spot position : see Figure a.

measurement instrument : TOPCON's luminance meter SR-3A or BM-7 or compatible (see Figure 1).

Fig. 3-a Definition of points

$5'' < S \leq 12.3''$  (see Figure b) . H,V : Active area

Light spot size  $\varnothing = 5\text{mm}$  (BM-5) or  $\varnothing = 7.7\text{mm}$  (BM-7) 50cm distance or compatible distance from the LCD surface to detector lens. test spot position : see Figure b.

measurement instrument : TOPCON's luminance meter SR-3A or BM-7 or compatible (see Figure 1).

**Fig. 3-b Definition of points**

## 7. Reliability Test Items

| Test Item                             | Test Conditions                                                                                       |
|---------------------------------------|-------------------------------------------------------------------------------------------------------|
| High Temperature Storage              | Ta= +80°C 96hrs                                                                                       |
| Low Temperature Storage               | Ta= -30°C 96hrs                                                                                       |
| High Temperature Operation            | Ta= +70°C 96hrs                                                                                       |
| Low Temperature Operation             | Ta= -20°C 96hrs                                                                                       |
| High Temperature and Humidity Storage | Ta= +60°C, 90% RH 96hrs                                                                               |

Notes: The test result shall be evaluated after the sample has been left at room temperature and humidity for 2 hours without load. No condensation shall be accepted. The sample will not be accepted if appear these defects:

- 1). Air bubble in the LCD
- 2). Seal leak or Glass crack
- 3). Non display or abnormal display
- 4). Brightness reduction >50%

8. Mechanical Drawing

## 9. Packing

### Packing Method

#### Steps:

1. Put module into tray cavity
2. Tray stacking
3. Put 1 cardboard under the tray stack and 1 cardboard above
4. Fix the cardboard to the tray stack with adhesive tape
5. Put the tray stack into carton
6. Carton sealing with adhesive tape

## 10. Precautions for Use of LCD modules

### 10.1 Handling Precautions

10.1.1. The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.

10.1.2. If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.

10.1.3. Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

10.1.4. The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.

10.1.5. If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:

- Isopropyl alcohol
- Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:

- Water
- Ketene
- Aromatic solvents

10.1.6. Do not attempt to disassemble the LCD Module.

10.1.7. If the logic circuit power is off, do not apply the input signals.

10.1.8. To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.

10.1.8.1. Be sure to ground the body when handling the LCD Modules.

10.1.8.2. Tools required for assembly, such as soldering irons, must be properly ground.

10.1.8.3. To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.

10.1.8.4. The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

### 10.2 Storage Precautions

10.2.1. When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.

10.2.2. The LCD modules should be stored under the storage temperature range if the LCD modules will be stored for a long time, the recommend condition is :

Temperature : 0℃ ~40℃    Relatively humidity: ≤80%

10.2.3. The LCD modules should be stored in the room without acid, alkali and harmful gas.

### 10.3 Transportation Precautions

The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.
